

# MARKET SUMMARY

Complete Recap of Today's Market Activity

## Steady Start; No Drama From ISM Data

Market Summary: Monday, July 6, 2026 - 1:11PM

Bonds weathered the 3-day weekend without issue. We started the day modestly stronger, but have moved back closer to unchanged levels in the first 2 hours. The day's only big-ticket (or semi-big-ticket?) econ data was the ISM Services index, but admittedly, that has more of an impact when it's released BEFORE the jobs report. Moreover, it was right in line with expectations at 54.0 vs 54.0, so even if this had come out last week, it may not have moved the needle.

### Steady Start; No Drama From ISM Data

Bonds weathered the 3-day weekend without issue. We started the day modestly stronger, but have moved back closer to unchanged levels in the first 2 hours. The day's only big-ticket (or semi-big-ticket?) econ data was the ISM Services index, but admittedly, that has more of an impact when it's released BEFORE the jobs report. Moreover, it was right in line with expectations at 54.0 vs 54.0, so even if this had come out last week, it may not have moved the needle.

There are always multiple ways to approach trends and in markets. When it comes to bonds, the more neutral option is to focus on the recent trading range which has mostly held between 4.52 and 4.51 in 10yr yields.

The bigger picture is a bit more gloomy as it involves a longer-term uptrend in yields (ongoing).

But if we zoom out even more, we find that yields have tended to encounter a supportive ceiling at or just over 4.70%, which was basically the high on May 19th.

**MBS MORNING:** Red Night, Green Morning After Weaker Jobs Data

## Today's Mortgage Rates

30YR Fixed 6.59% -0.01% | 15YR Fixed 6.16% -0.01% 7/6/2026

### Mortgage Rates Recover Somewhat

Today is a half day for financial markets, which is a typical feature of a federal holiday weekend. Because tomorrow is fully closed, the big jobs report (normally a Friday affair) was instead released this morning. It ended up helping rates move lower.

The jobs report (officially "The Employment Situation") measures new jobs created (or lost) each month in addition to the unemployment rate. The job count was much weaker than expected and, although the unemployment rate technically dropped, it did so for the wrong reasons (fewer people considered themselves part of the workforce). In fact, if we adjust for labor force participation, unemployment actually moved higher.

The jobs report is the most important economic data as far as bonds are concerned. And because bonds dictate rates, there's a clear connection to the mortgage world. Weaker jobs data = lower rates, all else equal. Today was no exception with MND's 30yr fixed rate index erasing most of yesterday's spike.
