

MARKET SUMMARY

Complete Recap of Today's Market Activity

Uneventful Summertime Monday

Market Summary: Monday, July 6, 2026 - 4:29PM

Volume and--sometimes--volatility can be generally lower in the middle of the summertime months as fewer traders are consistently at bond desks--especially on days adjacent to 3-day holiday weekends. Today was a classic example. Bonds barely budged and volume is on track for one of the lightest full trading days of the year. In many ways, today was simply a 4th weekend day and we'll know more about how bonds are feeling on Tuesday. But at the very least, it's somewhat constructive to be starting the week without any extension of last week's selling pressure.

Steady Start; No Drama From ISM Data

Bonds weathered the 3-day weekend without issue. We started the day modestly stronger, but have moved back closer to unchanged levels in the first 2 hours. The day's only big-ticket (or semi-big-ticket?) econ data was the ISM Services index, but admittedly, that has more of an impact when it's released BEFORE the jobs report. Moreover, it was right in line with expectations at 54.0 vs 54.0, so even if this had come out last week, it may not have moved the needle.

There are always multiple ways to approach trends and in markets. When it comes to bonds, the more neutral option is to focus on the recent trading range which has mostly held between 4.52 and 4.51 in 10yr yields.

The bigger picture is a bit more gloomy as it involves a longer-term uptrend in yields (ongoing).

But if we zoom out even more, we find that yields have tended to encounter a supportive ceiling at or just over 4.70%, which was basically the high on May 19th.

Mortgage Rates Start New Week Flat

Volatility is always a risk surrounding 3 day holiday weekends when it comes to markets and , but this time around, things have been very calm. The average top-tier 30yr fixed rate remained almost perfectly flat versus last Thursday with the MND index technically falling by 0.01%.

This week's calendar of scheduled events is less consequential than last week's. After today, there is essentially no big-ticket economic data.

In the bigger picture, 30yr fixed rates are near the center of their range over the past 6-7 weeks. Collectively, that range represents the highest levels in roughly 10 months with 30yr fixed rates averaging just over 6.6%.
