

MARKET SUMMARY

Complete Recap of Today's Market Activity

Wednesday's Gains Had More Staying Power Than Tuesday's

Market Summary: Thursday, July 16, 2026 - 7:05AM

Both Tuesday's CPI and Wednesday's PPI came in much lower than expected. Both resulted in fairly big bond rallies. Whereas Tuesday's rally faded gradually after the initial pop, Wednesday's rally continued at a moderate pace as the day progressed. The only trade off was that the initial pop was a bit smaller. The net effect is that yields fell to the same levels seen in the few minutes following Tuesday's CPI. In that sense, the rally implies clear resistance at a 10yr yield level of 4.54%. From a strategic standpoint, rate watchers must consider that the data driving the rally benefited from June's lower fuel prices and that this dynamic has shifted back toward higher prices in July. With that in mind, the bond market's willingness to rally is actually rather impressive.

PPI Does Its Best CPI Impression. Bonds Like It

The Producer Price Index (PPI) is not normally a huge market mover, but it has its moments of moderate impact. Today is such a moment as PPI did its best to mimic yesterday's sharply lower CPI. There were also big revisions to previous months which brought annual PPI a full 1.0% lower from last month's initial reading (5.5% today vs a 6.0 previous reading, revised from 6.5% when initially reported). Fuel prices loom large in this data, as evidenced by Core monthly PPI at 0.2 vs 0.3. Unlike yesterday, most of today's shift was seen in revisions to previous months--especially May (headline revised from 1.1 to 0.6). Laundry list of little numbers aside, bonds like it. Fed Funds Futures improved. Treasuries and MBS have gone from modestly weaker to moderately stronger after the report.

As with yesterday, expect shorter term yields to improve more, and be cognizant of the risk that a breakout in oil prices could give bonds second thoughts about the AM rally.

Today's Mortgage Rates

30YR Fixed	6.64%	-0.06%	15YR Fixed	6.18%	-0.02%	7/15/2026
------------	-------	--------	------------	-------	--------	-----------

Mortgage Rates Fall to Lowest Levels in a Week

moved lower again today following another lower-than-expected reading on an inflation report. Yesterday's Consumer Price Index (CPI) had a bigger impact on the underlying bond market, but today's Producer Price Index (PPI) wasn't far behind. Additionally, bonds did a better job of holding onto the improvement into the afternoon hours. This allowed mortgage lenders to drop rates even more than they did yesterday (0.06% today versus 0.05% yesterday). This takes the average top-tier 30yr fixed rate to 6.64% which is the lowest in just over a week.
