Complete Recap of Today's Market Activity

Good Luck Making Sense of Retail Sales Reaction

Market Summary: Friday, August 14, 2026 - 12:04PM

Based on a few research papers that have attempted to quantify the impact of various economic reports as well as the general consensus among economic calendar purveyors, Retail Sales is allegedly a top tier market mover. In fact, a somewhat recent attempt by CME to rank econ data has in 5th place ahead of CPI, PPI, and PCE. But in our experience, it is a report that has decent potential to cause market movement only when there's an open question as to the health of the economy. It is also easy for the market to look past when there are temporary factors in play. Fuel price volatility qualifies as one of those disqualifiers ([even the calendar timing of Amazon Prime Day](#) is often cited as a reason to tune out month-to-month discrepancies), and the market is trading accordingly.

MBS Now Down an Eighth From Some Rate Sheet Print Times

Bonds have been selling off slowly and steadily since the 8:30am econ data. UMBS 5.5 coupons are down an eighth of a point on the day and also versus the early lender rate sheet window (9:30-10am). The jumpier lenders could already be considering negative reprices, but just barely.

Lowest Mortgage Rates in Nearly 4 Weeks

dropped noticeably on Thursday on a combination of lower oil prices and a lower inflation reading via the Producer Price Index (PPI). Rates are driven by bonds and bonds are highly responsive to the outlook for inflation and the economy. The Iran war caused inflation implications to spike and the periodic relief in fuel prices has coincided with bond market improvement (and lower rates).

The official inflation data is just another form of the same benefit. Fuel prices are just one aspect of inflation--albeit a critical one, but they're more of a leading indicator. In contrast, big government data like PPI and yesterday's CPI (Consumer Price Index) help the market more accurately measure the true impact of fuel prices.

PPI was only slightly lower than expected, but that was enough to account for most of today's improvement in rates. Top tier 30yr fixed rates fell 0.05% to 6.69% for the average lender. That's the lowest reading since July 17th--just one day shy of 4 weeks ago.
