MARKET SUMMARY

Complete Recap of Today's Market Activity

Counting Down to Warsh

Market Summary: Thursday, August 27, 2026 - 12:38PM

While it may end up being a complete non-event, the bond market is counting the hours until Friday's Warsh appearance at Jackson Hole. There's nothing else on the calendar this week with any serious potential to upset the apple cart (and again, it's debatable that Warsh's speech is much more of a risk than random pre-weekend position squaring). But this is the bond market on Jackson Hole week, so the Fed Chair's speech is always a wild card simply because a few past examples have been relevant. In the meantime, bonds will take cues from fuel prices, corporate issuance, and any oversized tradeflows.

Counting Down to Warsh

While it may end up being a complete non-event, the bond market is counting the hours until Friday's Warsh appearance at Jackson Hole. There's nothing else on the calendar this week with any serious potential to upset the apple cart (and again, it's debatable that Warsh's speech is much more of a risk than random pre-weekend position squaring). But this is the bond market on Jackson Hole week, so the Fed Chair's speech is always a wild card simply because a few past examples have been relevant. In the meantime, bonds will take cues from fuel prices, corporate issuance, and any oversized tradeflows.

UPDATE: Heads Up: Weakest Levels But 10yr Holding

MBS MORNING: Bonds Pouting After Higher PCE

Today's Mortgage Rates

30YR Fixed	6.75%	+0.00%	15YR Fixed	6.32%	+0.00%	8/27/2026

Mortgage Rates Lower or Higher, Depending on When You Look

Intraday volatility in the bond market can make it tricky to track day over day changes in . Lenders publish the day's first rates based on bond market prices around 9:30-10:00am ET, but things can change if bonds move enough.

Yesterday, bonds improved enough in the afternoon for many lenders to offer lower rates. If we compare today's rates to yesterday afternoon's better examples, we're slightly worse off now. But if we compare to yesterday morning, we're slightly better.

At times like this, if you're just looking for a general sense of how the rate landscape is evolving, it can be more useful to simply track underlying bond market trends. A 10yr or 5yr Treasury yield is a good approximation of mortgage bond movement. Whether we use Treasuries or mortgage-backed securities, both suggest rates should be almost exactly in line with yesterday morning's levels based on prices at the time of this article.

Why, then, did I say that today's rates are slightly better than yesterday morning's? Simple! bonds have lost ground since this morning's mortgage rates came out. The implication is that if bonds didn't move between now and tomorrow morning, the average mortgage lender would likely offer slightly higher rates.
