

Paradoxical Rally in Bonds Thanks to Higher Fed Hike Odds

Market Summary: Friday, September 11, 2026 - 1:42PM

We've been saying for a while that the longer end of the bond market really wants to see the Fed get serious about fighting inflation. This is why yields spiked on July 29th when the Fed held rates steady and Warsh said he'd let the bond market do the heavy lifting. Now today, we have back-to-back inflation reports that resulted in Fed Funds Futures pricing in a 90% chance of a hike at next week's meeting. Fed Funds Futures are the only thing that's unequivocally selling off this morning. 2yr Treasuries (heavily impacted by Fed expectations) are mixed, but the longer end of the curve is now rallying thanks to the expectation of the rate hike and the hope that it pushes back against inflation.

Down Over an Eighth From Rate Sheet Print Times

Bonds have been slowly losing ground after this morning's rally and while MBS are still up an eighth on the day, they're now down more than an eighth from most lenders' rate sheet print times. Some lenders are seeing as much as 6 ticks (.19) of weakness. As such, negative reprices can't be ruled out.

30yr Fixed Rates Jump to 7.07%

You may have seen other headlines today that reference 30yr fixed rates of 6.76%. Those stories would be citing Freddie Mac's weekly rate survey which is an average of the 5 business days (4 in this case, due to the holiday) ending yesterday (September 9th).

Because of that methodology, the number lags reality. Today alone, the average lender moved up 0.125% in rate. In addition, Freddie no longer accounts for "points" (additional money paid upfront for a lower rate). In other words, 6.75% with one point is roughly the same rate as 7.00% with no points.

As a reminder, our daily rate index accounts for the impact of points so day to day comparisons are always apples to apples.

With all that in mind, today's average top-tier 30yr fixed rate is up to 7.07% from 6.97% yesterday and 6.89% the day before. This is a substantial 2-day change and the highest rate we've seen since May 21, 2025.

While some people are erroneously talking about last night's news regarding \$5k payments from the President, there are only two real factors that account for a vast majority of the upward movement. The first was yet another surge in fuel prices. The second was a poorly received Producer Price Index this morning (an inflation report that contributes to the even more important PCE inflation data due out at the end of the month).
