Complete Recap of Today's Market Activity

Slightly Stronger Start

Market Summary: Tuesday, October 20, 2026 - 3:55PM

The bond market continues to decide who it wants to be in Q4, 2026--the harbinger of inflation concerns, debt issuance and economic growth or a safe haven for cash being freed up by AI capex deleveraging. We're starting slightly stronger today with the AI deleveraging trade apparently setting the tone. Movement is too modest to demand any rigorous analysis (Nasdaq lower, yields lower), but at least it's green.

MBS More Than an Eighth Off Highs

Treasuries were at their best levels of the day at 10:30am ET, but are now at their worst levels with 10yr yields still down 1.3bps at 5.122.

MBS aren't yet back to the AM lows, but are off the AM highs by roughly 6 ticks (.19).

Lenders who priced at those highs (around 10:30am or shortly after) could technically justify a small negative reprice.

Mortgage Rates Move Slightly Lower

dropped 0.03% today on average leaving the top-tier 30yr fixed rate index at 7.40% vs 7.43% yesterday--the third lowest level in more than 3 weeks.

As has been and continues to be the case, the lower rates seen since last Wednesday are primarily being driven by concerns about deleveraging and potential contagion in the AI sector. One of the most closely-watched bellwethers has been Coreweave where a sharp decline in stock prices and sharp increase in corporate bond yields has broadly mirrored recent moves in .

Some of today's intraday volatility can also be viewed in the context of oil prices and war-related headlines, but we'd caution against placing too much emphasis on the oil price correlation. It's been highly unreliable for more than a month.
