MARKET SUMMARY

Complete Recap of Today's Market Activity

Slightly Stronger Start. Mostly Holding After ISM Data

Market Summary: Monday, November 2, 2026 - 12:07PM

Bonds were initially a hair weaker at the start of the overnight session, but rallied gradually after that. The sharpest gains arrived at the 9:30am NYSE open, suggesting money manager reallocations and "new month" trades. ISM Manufacturing hit 30 minutes later and the first reaction was modest bounce toward slightly higher yields and slightly higher stock prices. Perhaps the most notable development is that stocks are back up to Friday morning's levels even as bonds remain 4-5bps lower compared to the same baseline.

UPDATE: Quick Recovery After Anthropic Headlines

ALERT: Weakest Levels

Today's Mortgage Rates

30YR Fixed	7.27%	+0.00%	15YR Fixed	6.92%	+0.00%	11/2/2026

Mortgage Rates End Week at Lows

The rate market continues taking cues from turmoil in the tech sector. That resulted in the lowest rates in more than a month today as tech stocks slide to their lowest levels since July.

The biggest shift for the underlying bond market (bonds dictate rates) came just before 1pm on reports that Anthropic's post IPO credit rating was not likely to be "investment grade." That matters because it means Anthropic would face higher borrowing costs.

Given the company's key role in driving the AI buildout, there are two implications that helped bonds/rates today. First, higher borrowing costs mean lower potential debt issuance, and that issuance has been a key factor in pushing higher in 2026. Second, any headwinds for major AI companies suggest potential economic headwinds given the central role AI plays in the current economic growth cycle. In general, lower/slower economic growth is good for rates/bonds, all else equal.

The average mortgage lender added modestly to yesterday's larger improvement, resulting in a top-tier 30yr fixed rate just under 7.30%. This is the lowest level since September 23rd, 2026.
